

DataTilt™

DataTilt™ is a sensor sub designed to acquire BHA inclination or can be used to determine placement of coiled tubing in multi-lateral completions.

DataTilt™ is a very compact system allowing for versatility on coiled tubing or slickline. The system can be custom-manufactured for your specific tolerance requirements. A temperature sensor is included as a standard for additional reservoir / BHA analysis.

DataTilt™ can be deployed in tandem with other UAI products such as DataCoil™ and DataCollar™ to enhance operator service and job analysis.

Features

- Inclination sensor
- Temperature sensor
- Impact resistant electronics
- NACE Compliant Materials
- High-speed sample rate available

Applications

- BHA angle analysis
- MLT entry confirmation
- Fishing Operations
- Milling / Drilling operations
